

PEDESTRIAN RECREATIONAL BRIDGES

Custom Designed & Prefabricated Steel Bridges

U.S. Bridge can offer you a broad range of distinctive designs that are not only aesthetically pleasing but also functional. Want something different? As the largest manufacturer of prefabricated steel bridges, we can custom design a solution to meet your unique application.

- Clear Spans of up to 76 m.
- Widths up to 4 m.
- Pre-Assembled Complete or in Sections
- Fast Installation
- Can be Designed to Support Utilities
- Galvanized, Self Weathering or Painted

Our unique **Double Bottom Chord** tension member design not only eliminates the possibility for the collection of water and debris but also, more importantly, permits the structure to be deemed "**redundant**".

AASHTO Bridge Design Manual states that to qualify for a "redundant" designation, the load path structures must have a multi-load path where a single fracture in a member cannot lead to a failure of the entire structure.
