STORMCON

STORMWATER MANAGEMENT SOLUTIONS

CONCAST. CONSTRUCT. CONNECT.

INNOVATIVE SOLUTIONS

Traditional stormwater ponds are costly, risky, and require large land areas. CONCAST & STORMCON offer a smarter alternative with underground systems that free up space, support higher density development, eliminate safety hazards, prevent mosquito breeding, reduce pests, protect streams, and lower long term maintenance costs. Our innovative in house designs deliver versatile stormwater retention and detention solutions that strengthen communities while safeguarding the environment.

ARCH CHAMBERS

Our arch chambers have ETV verification for quality control, making them one of the few products of their kind with this assurance. Available in a range of sizes, they can be tailored to meet the specific needs of your project. Typically installed underground beneath parking areas to maximize usable land, they can also be placed in landscaped or grassy areas. Chambers may be installed with or without an impermeable liner, allowing for infiltration or full containment depending on site requirements.

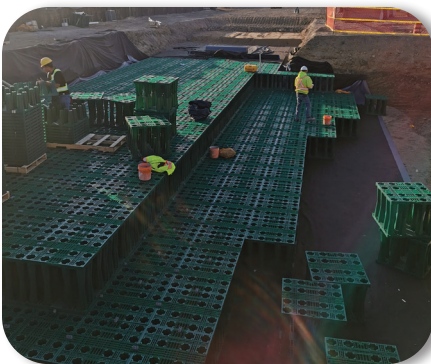

APPLICATIONS:

- Under parking lots
- Under green spaces
- Areas with lots of land

GREENSTORM

GreenStorm is a geocellular polypropylene stormwater management solution that is designed for extended detention and retention of stormwater. This modular system is quick and easy to install, has a 96% void ratio, and may be stacked up to 5 blocks high (3.30 m). It allows for smaller retention tank footprints, maximizing space on your developments.

APPLICATIONS:

- Under parks and landscape areas
- Under parking lots and roads
- Sites with limited available land

STORMCRETE

StormCrete's precast concrete modular design is adaptable and very easy to install. It can be engineered as needed to meet your design specifications, and can accommodate human entry for maintenance. It's rigid design makes it ideal for deep applications and heavy-duty loading.

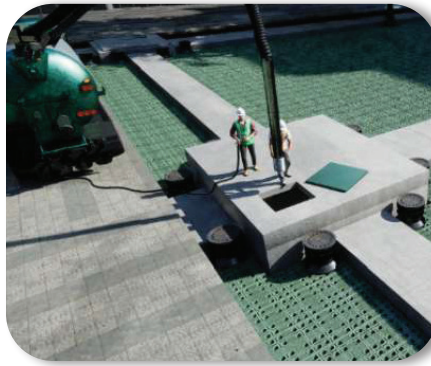

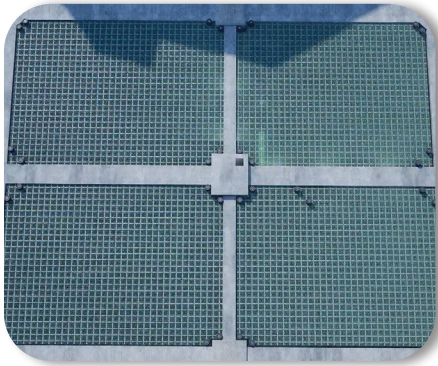

APPLICATIONS:

- Ministry of Transportation Ontario
- Deep applications with no cover depth limitations
- Shallow applications with heavy live loads

THE VAULT

The Vault is a next-generation stormwater solution that combines the benefits of GreenStorm and StormCrete into one patent-pending system. It maximizes land use, supports infiltration or full containment, and can even be designed with permanent pools to mimic traditional ponds. With an internal bypass option to cut costs, the Vault delivers a smarter, more sustainable alternative to outdated stormwater designs.

APPLICATIONS:

- Large systems for municipal applications

PLASTIC, CONCRETE, AND HYBRID

Every project has varying requirements. We are proud to offer a wide range of products in plastic, concrete, and hybrid solutions, to achieve your goals. Each of our three stormwater management product lines offers unique benefits, specific to your site conditions and specifications. Additional precast concrete solutions, including our CON/SPAN and Tri Span products, are available for large volume tanks. We'd be happy to discuss your next project and recommend a solution that's just right for you. Get in touch with us today to start a conversation:
